

VERBAL HEART RATE ANNOUNCEMENT WHILE YOU SWIM

Audible Heart Rate in Real Time

Heart rate announced while you move; no need to pause and look at a watch

Infrared Sensor Technology

Picks up heart rate through your earlobe

Announcement Increments

Set the device to announce every 10 sec, 20 sec, 30 sec, 45 sec, 1 min, 2 min, or 5 min

USB Charging

To recharge, plug directly into the USB port on a computer or USB wall charger

Bone Conduction Audio

Verbally conveys your heart rate through your cheek bones into your inner ear; no ear buds needed

Easy Attachment

No chest strap or watches needed; just slip inside your goggle strap

Instant Heart Rate Button

Repeats last recorded heart rate

Rechargeable Lithium-Ion Battery

Charges through USB port and provides 8* hours of use

*Depending on interval settings

New Heart Rate Monitor Reports Results as You Swim

I use the AquaPulse Heart Rate Monitor consistently during my training practices and I am impressed with the quality and accuracy of information.

During sets I try to hold my heart rate at a specific target zone and use my heart rate to dictate my rest time. For example, I'll do a series of 50's with my heart rate at 160, and then every time I rest at the wall I will wait until my heart rate recovers to 120 before taking off again.

The AquaPulse is much easier and more accurate than taking my pulse for 10 seconds, and I like how I can adjust how often I hear the announcements. Plus, I can also instantly hear my heart rate at a press of a button, which gives me feedback whenever I need it.

With the AquaPulse I can monitor my swim and gauge how hard I am working. Every lap I can hear my heart rate

and know how my body is performing. I can make instant changes in the middle of a set to optimize my workout.

Overall I can say the AquaPulse has changed the way I train. It motivates me and allows me to train more effectively.
